**Used Oil Aging For LSPI
Form 3
Summary of Test Method**

The LSPI engine oil aging test is a fired engine dynamometer lubricant test which ages the engine oil in preparation for the evaluation of the oil in the Seq IX LSPI test. The running duration is 72 hours.

The Used Oil Aging Test for LSPI uses a 2.0 liter Ford EcoBoost 4-cylinder engine as the test apparatus. The engine is turbocharged and gasoline direct-injected, and incorporates dual overhead cams and four valves per cylinder. The engine is modified to provide higher than normal blowby. An eight-hour break-in schedule is conducted prior to going on test conditions.

The test sequence is as outlined in the table below:

Parameter	Units	Quantity
Duration	H	72
Engine Speed	r/min	2500
Engine Torque	N·m	128
Oil Gallery Temperature	°C	100
Coolant Out Temperature	°C	85
Coolant Flow	L/min	70
Intake Air Temperature	°C	32
Intake Air Pressure	kPa	0.05
Intake Air Humidity	g/kg	11.4
Coolant Pressure	kPa	70
Air Charge Temperature	°C	30
Air-Fuel Ratio	λ	1.0
Exhaust Backpressure	kPa	107
Blowby Flowrate	L/min	65-75

Declarations

No. 1 All requirements of the ACC Code of Practice for which the test laboratory is responsible were met in the conduct of this test. Yes _____ No _____ *

No. 2 The laboratory ran this test for the full duration following all procedural requirements; and all operational validity requirements of the latest version of the applicable test procedure (ASTM or other), including all updates issued by the organization responsible for the test, were met. Yes _____ No _____ *

If the response to this Declaration is “No”, does the test engineer consider the deviations from operational validity requirements that occurred to be beyond the control of the laboratory?
Yes _____ * No _____

No 3. A deviation occurred for one of the test parameters identified by the organization responsible for the test as being a special case. Yes _____ * No _____ (This currently applies only to specific deviations identified in the ASTM Information Letter System)

	Operational review of this test indicates that the results should be included in the Multiple Test Acceptance Criteria calculations.
	*Operational review of this test indicates that the results should not be included in the Multiple Test Acceptance Criteria calculations.

Note: Supporting comments are required for all responses identified with an asterisk.
