### **Caterpiller Oil Aeration Test**

#### Version

#### Form 1 Title / Validity Declaration Page

### Conducted For

V	Valid; The Reference Oil / Non-Reference Oil was evaluated in
=	accordance with the test procedure.
I =	Invalid; The Reference / Non-Reference Oil was not evaluated in accordance with the test procedure.
N =	Results cannot be interpreted as representative of oil performance (Non-Reference Oil) and shall not be used in determining average test results using Mutiple Test Criteria.

NR = Non-Reference Oil Test
RO = Reference Oil Test

### Caterpiller Oil Aeration Test Form 3 Summary of Test Method

The CAT Oil Aeration Test is an engine-dynamometer test which evaluates the ability of an engine oil to resist aeration.

The test engine is a CAT C-13 diesel engine with ACERT technology. It is an in-line six cylinder, four stroke, turbocharged engine with electronically controlled fuel injection.

Oil Aeration Test Conditions		
Parameter	Value	
Time, h	50	
Speed, r/min	1800	
Load, Nm	0	
Fuel Flow, g/min	Record	
Coolant Out Temperature, °C	90	
Fuel In Temperature, °C	40	
Oil Gallery Temperature, °C	90	
Intake Air Temperature, ° C	25	
Tailpipe Exhaust Temperature, °C	Record	
Intake Air Restriction, kPa Absolute	96	
Intake Manifold Pressure, kPa	Record	
Exhaust Back Pressure, kPa A	104	
Coolant System Pressure, kPa	99 - 107	
Oil Gallery Pressure, kPa	Record	
Crankcase Pressure, kPaA	103	
Oil Sump Temp	Record

#### Declarations

- No. 1 All requirements of the ACC Code of Practice for which the test laboratory is responsible were met in the conduct of this test. Yes \_\_\_\_\_ No\_\_\_\_\*
- No. 2 The laboratory ran this test for the full duration following all procedural requirements; and all operational validity requirements of the latest version of the applicable test procedure (ASTM or other), including all updates issued by the organization responsible for the test, were met. Yes \_\_\_\_\_ No\_\_\_\_\_\*

If the response to this Declaration is "No", does the test engineer consider the deviations from operational validity requirements that occurred to be beyond the control of the laboratory? Yes \* No

No. 3 A deviation occurred for one of the test parameters identified by the organization responsible for the test as being a special case. Yes \_\_\_\_\_\* No\_\_\_\_\_(*This currently applies only to specific deviations identified in the ASTM Information Letter System*)

#### **Check The Appropriate Conclusion**

Operational review of this test indicates that the results should be included in the Multiple Test Acceptance Criteria calculations.
*Operational review of this test indicates that the results should not be included in the Multiple Test Acceptance Criteria calculations.

Note: Supporting comments are required for all responses identified with an asterisk.
