ISB Viscosity D XXXX - Engine Oil Test

Report Packet Version No.

Conducted For

V = Valid; The reference oil/non-reference oil was evaluated in accordance with the test procedure.
I = Invalid; The reference oil/non-reference oil was not evaluated in accordance with the test procedure.
Results cannot be interpreted as representative of oil performance N = (non-reference oil) and shall not be used in determining an average test result using multiple test criteria.

NR = Non Reference Oil Test
RO = Reference Oil Test

ISB Viscosity D XXXX - Engine Oil Test Form 3 Summary of Test Method

The ISB Viscosity Engine Oil Test is a fuel engine-dynamometer test which evaluates diesel engine oils for performance characteristics including viscosity increase and soot concentrations (loading). This test is a single-phase, steady state test (constant speed and load). The test is up to 156 hours and is run with retarded fuel injection timing to produce elevated soot levels in the oil.

The test engine is a Cummins 5.9L diesel engine. It is an in-line six cylinder, four-stroke, turbocharged engine. It has electronically controlled fuel injection with a common rail fuel system.

Declarations

- No. 1 All requirements of the ACC Code of Practice for which the test laboratory is responsible were met in the conduct of this test. Yes _____ No____*
- No. 2 The laboratory ran this test for the full duration following all procedural requirements; and all operational validity requirements of the latest version of the applicable test procedure (ASTM or other), including all updates issued by the organization responsible for the test, were met. Yes _____ No_____*

If the response to this Declaration is "No", does the test engineer consider the deviations from operational validity requirements that occurred to be beyond the control of the laboratory? Yes _____* No_____

No. 3 A deviation occurred for one of the test parameters identified by the organization responsible for the test as being a special case. Yes <u>*</u> No<u>(This currently applies only to specific deviations identified in the ASTM Information Letter System)</u>

Check the Appropriate Conclusion

Operational review of this test indicates that the results should be included in the Multiple Test Acceptance Criteria calculations.
*Operational review of this test indicates that the results should not be included in the Multiple Test Acceptance Criteria calculations.
