The Mack T-12A EGR Engine Oil Test is a fuel engine-dynamometer test which generates an oil sample to be used for MRV Viscosity requirements. This test is a one-phase, steady state test (constant speed and load), run with heavy EGR. The test is 100 h and is run with retarded fuel injection timing to produce elevated soot levels in the oil.

The test engine is a Mack E-TECH V-MAC III diesel engine with EGR. It is an in-line six-cylinder, four stroke, turbocharged engine. It has electronically controlled fuel injection with six individual electronic pumps.
