REPORT PACKET REVISION NOTICE: D5800-20150224

VERSION: 20150224

EFFECTIVE DATE: May 15, 2015

DATE: April 15, 2015

TO: D02.B0.07 D5800 Mailing List

FROM: Tom Schofield

An updated D5800 test report packet has been approved by ballot of the D02.B0.07 Volatility Surveillance Panel and has completed beta testing by the ASTM Data Communications Committee. The only revisions are the addition of the field FIRMWARE and an update to the data dictionary version date. **D5800 Report Packet Version 20150224 goes into effect on May 15, 2015.**

For statistical monitoring purposes, it is important that all labs report FIRMWARE uniformly as follows:

- 1. For Procedure B tests, ISL model NCK2, report FIRMWARE in the format Vx.x or Vx.xx (for example, V1.1 or V1.42).**
- 2. For Procedure B tests, ISL model NCK25G, report FIRMWARE in the format Vx.x/y.y (for example, V2.5/2.0).**
- 3. For Procedure C tests, Tannas model SVT1, there currently are no firmware versions or updates, and labs are to report FIRMWARE as N/A.**

On the effective date, the revised D5800 report packet version 20150224 will replace the current version 20040205. Version 20150224 report forms, data dictionary, repeating field specification, summary of changes and flatfile template are available for ftp download from the TMC's website:

<http://www.astmtmc.cmu.edu>

On the left menu of the TMC's home page, select Report Forms & Data Dictionary → D5800 → beta → current. On the effective date the folders will be moved to Report Forms & Data Dictionary → D5800 → current.
