REPORT PACKET REVISION NOTICE: D874-20070126

VERSION: 20070126

EFFECTIVE DATE: July 26, 2007

DATE: June 26, 2007

TO: D02.B07 D874 Mailing List

FROM: Tom Schofield

A revised D874 test reporting packet is now available. The prior report packet, version 20061113, had been approved and beta tested by the ASTM Data Communications Committee (DCC), but subsequently it was requested that the weighing fields be expanded from a precision of two decimals to four decimals, and that the final result field name, character type and precision be changed. Those changes have been made in the new version 20070126 being issued today. This version had been distributed to the surveillance panel for review (there were no additional comments) and has been beta tested by the DCC.

The revised report packet version 20070126 replaces the current version 20061113 effective July 26, 2007. On that date the TMC will begin accepting TMC data for D874 calibration purposes.

Version 20070126 report form templates, data dictionary, repeating field specification and summary of changes are available from the TMC's website:

(Select Report Forms & Data Dictionaries → Bench Test Areas → D874. The new report packet files can be found under the d874/beta/current directory. They will be moved to the d874/current directory on the effective date.)

Please direct any inquiries to my attention.
