REPORT PACKET REVISION NOTICE: EOEC-20200324  
VERSION: 20200324  
EFFECTIVE DATE: April 29, 2020  
DATE: April 13, 2020  
TO: D02.B0.07 Engine Oil Seal Test Mailing List  
FROM: Tom Schofield

An updated EOEC test report packet has been approved by vote of the D02.B0.07 Engine Oil Seal Test Surveillance Panel and has completed beta testing by the ASTM Data Communications Committee (DCC). The revisions include the addition/modification of fields to allow for the application of correction factors to the final reported test parameters (Volume Change, Hardness Change, Tensile Strength Change and Elongation Change). **On the effective date, the TMC will begin evaluating reference test results based on the final, corrected test results (new fields), rather than the averaged results for each parameter.** For those fields that do not presently have correction factors, the correction factor will be zero and the final results shall be reported accordingly.

**EOEC Report Packet Version 20200324 goes into effect on April 29, 2020.** The surveillance panel has requested an abbreviated implementation period.

On the effective date, the revised EOEC report packet version 20200324 will replace the current version 20060725. Version 20200324 report forms, data dictionary, repeating field specification, summary of changes and flatfile template are available now from the TMC's website for beta report packages:

<http://www.astmtmc.cmu.edu/ftp/datadict/eoec/beta/current/>

On the effective date the folders will be moved to:

<http://www.astmtmc.cmu.edu/ftp/datadict/eoec/current/>

Please direct any inquiries to my attention:
