REPORT PACKET REVISION NOTICE: LDEOC-20200727

VERSION: 20200727

EFFECTIVE DATE: March 3, 2021

DATE: February 1, 2021

TO: D02.B0.07 Engine Oil Seal Test Mailing List

FROM: Tom Schofield

An updated LDEOC test report packet has been approved by vote of the D02.B0.07 Engine Oil Seal Test Surveillance Panel and has completed beta testing by the ASTM Data Communications Committee (DCC). The revisions include the addition/modification of fields to allow for the application of correction factors to the final reported test parameters (Volume Change, Hardness Change and Tensile Strength Change). **On the effective date, the TMC will begin evaluating reference test results based on the final, corrected test results (new fields), rather than the averaged results for each parameter.** For those fields that do not presently have correction factors, the correction factor will be zero and the final results shall be reported accordingly.

LDEOC Report Packet Version 20200727 goes into effect on March 3, 2021.

On the effective date, the revised LDEOC report packet version 20200727 will replace the current version 20161220. Version 20200727 report forms, data dictionary, repeating field specification, summary of changes and flatfile template are available now from the TMC's website for beta report packages:

<http://www.astmtmc.cmu.edu/ftp/datadict/ldeoc/beta/current/>

On the effective date the folders will be moved to:

<http://www.astmtmc.cmu.edu/ftp/datadict/ldeoc/current/>
