

## LDEOC/EOEC SURVEILLANCE PANEL

A LDEOC/EOEC conference call was held on 1-28-16, at 1 pm Central Standard Time. The following members were on the call:

Mike Kasimirsky – TMC  
Mike Lopez - Intertek  
Joe Franklin – Intertek  
Kimberly - Intertek  
Becky Grinfield – SwRI  
Mike Birke – SwRI  
Geifu Wu – Ashland  
Doyle Boese – Infineum  
Jason Bowden – OHT  
Matt Bowden – OHT  
John Evans – Savant

SP will need to make the decision to start evaluating 1006-2 as the replacement for 1006-1. TMC will ship out 1006-2 to labs and have it run as a candidate alongside 1006-1. The goal is to have the labs run two tests per material for both LDEOC and EOEC, with the exception of silicone, since it is the same for both tests. Two runs per lab, per material, should provide enough information to determine whether or not new limits will need to be set. OHT will donate the material for the testing. The following labs will be participating: Intertek, Valvoline, Lubrizol, ISP, and SwRI. Mike Birke will follow up with the labs once they have received the oil and elastomers to ensure the testing is completed in a timely manner.

The teleconference ended at 1:30 pm.
