MEMORANDUM: 10-001  
DATE: January 29, 2010  
TO: D02.B0.07 TEOST Mailing List  
FROM: Tom Schofield  
SUBJECT: D7097 MTEOS Technical Update: Phase-Out of Reference Oil 74

Per a recent Email ballot, the D02.B0.07 MTEOS Surveillance Panel agreed to drop TMC Reference Oil 74 from the MTEOS (D7097) monitoring system.

Effective immediately, the TMC will stop shipping Oil 74 for instrument calibration purposes. The TMC will continue to assign Oil 74, along with Oils 432 and 434 as usual, for calibration until the current laboratory inventories of oil 74 are depleted. Once depleted, Oil 74 will be considered obsolete and the TMC will continue to monitor MTEOS instrument calibrations with Oils 432 and 434.

Please direct any inquiries on this matter to my attention.

TMS/MEM10-001
