# 1N: Updated Standard Deviations A discussion

Elisa Santos

07 23 2020

## **Outline**

- Issue raised with respect to Top Groove Fill data: reference oils have diverged in severity (09/2016)
  - Parts variation was identified as the root cause
- Plots for TGF: RO809 trending down and RO811 moving up
- TGF Updated Standard deviations: 101 tests (1Y3998)
- Plots Other parameters
- Proposed standard deviations by oil based on liner 1Y3998
- Proposed standard deviation for calculating severity adjustments

# Updating standard deviations

- Lubrizol raised an issue see power point presentation
  - Caterpillar 1N TGF Dilemma from September 2016

```

- Next four slides will tell you that parts variation was identified as the root cause
- I will proceed with the analysis without excluding any data, assuming that parts variability is part of the test variability
- Please let me know if you have any concerns with anything and I will revise it

#### Caterpillar 1N TGF Dilemma from September 2016

- Problem so bad that RO 809 and RO 811 have diverged in TGF severity!
  - Historically, 809 with higher TGF than 811
  - Now 811 way higher than 809
    - This is not due to the correction factor, but another issue

Slide from Lubrizol's presentation

#### 01/10/2017 CAT SP Minutes

All,

I wanted to inform this group of the result of a recent 1N hardware test that we ran as a part of our continuing investigation into the TGF issues we discussed earlier last year. We ran a reference test on oil 811 in our stand 605. If the group recalls, 811 was supposedly the oil that was trending severe and our stand 605 was also supposedly a severe stand. We ran the recent reference test using a piston, rings, and liner from Southwest who had some older parts on hand and, as you might guess, we drastically shifted our results and went very mild with TGF as you can see in the plot below. Before running the test, we analyzed the Southwest parts and compared them against a set from Lubrizol. We found what we believe to be significant differentiation of the top ring face surface finish, as displayed in the second graphic below (the "Minus Major Asperity" values or those that discount a large valley in the Southwest ring). I believe this new information warrants further discussion and should probably be brought up again at a surveillance panel call. If there are any questions or comments, please let me know.

Andrew D. Stevens

Test Engineer, Mechanical Engineering & Testing

### 01/10/2017 CAT SP Minutes

#### 1N – Hardware effect on TGF (Lubrizol)

Greg: We sent out data from the last test.

We got old parts from SwRI. Should have been severe. But they went mild. There is a plot that was sent out. (Attached with these minutes)

Greg: Quite a bit difference in the surface profile of the top ring.

- Went back to minutes and found 3/31/2017 CAT O & H Panel Conference Minutes
  - Proper recording of parts data for 1K/1N (specifying serial number, date code, etc and ensuring consistency between labs)
  - Proper recording of parts data will allow for future investigations as needed
  - Example for liners:
    - LINERPN "Liner part number" (Include dash, dash change level) 1Y-3998-03
    - LINERBDC "Liner box date code" Date code on box label (14 characters)
    - LINERDC "Liner date code" day of year year's last digit (Ex. 133-6)
    - LINERSN "Sequence number" 0-99999
  - It also includes a CAT presentation SCOTE Hardware Marking March 31, 2017

#### Piston, Ring, Liner Part Numbers

From CAT

# The current test database with parts data vs. recommended recording – please follow the recommendations

Liners - an example

LINERPN – "Liner part number" (Include dash, dash change level) 1Y-3998-03 LINERBDC – "Liner box date code" Date code on box label (14 characters) LINERDC – "Liner date code" day of year - year's last digit (Ex. 133-6) LINERSN – "Sequence number" - 0-99999

# Plots - Top Groove Fill (TGF) original unit

### TGF Overall trend: 809 trending down and 811 moving up

TGF (after CF is applied)

# TGF by oil and Lab: 809 trending down and 811 moving up Only Labs A, B1, D and G have data for new liners – 1Y3998

TGF (after CF is applied)

TGF by Lab and Oil: 809 trending down and 811 moving up (current oils highlighted)
Labs are affected differently depending on the parts they get and how the test is run

TGF (after CF is applied)

# Plots – TGF (original unit) & transformed unit

## TGF by oil: original unit and transformed unit

# Updated Standard deviations: 101 tests (1Y3998)

Previous data set (57 tests/ 1Y3998 liner) used for calculating current standard deviation – Transformed unit

Combined data set (101 tests/ 1Y3998 liner) used for calculating proposed standard deviation - Transformed unit

# Plots – Other parameters

#### Weighted demerits (1Y3998 liner) over time by Lab and Oil

### Top Land Heavy Carbon (1Y3998 liner) over time by Oil (transformed unit)

# Top Land Heavy Carbon (1Y3998 liner) over time by Lab and Oil Labs: A, B1, D and G

# Average Oil Consumption g/kW-h (1Y3998 liner) over time by Lab and Oil

# Proposed standard deviations by oil

# Proposed standard deviation for calculating severity adjustments

- Exceed EWMA laboratory chart action limit for severity (all parameters noted below)
  - Calculate laboratory Severity Adjustment (SA) for each parameter that exceeds action limit, using the current laboratory EWMA (Zi) as follows:

Weighted Demerits:  $SA = (-Z_i) \times (27.1)^1$ 

Top Groove Fill:  $SA = (-Z_i) \times (0.488165)^2$ 

Top Land Heavy Carbon:  $SA = (-Z_i) \times (0.9)^T$ 

Based on 101 tests on liner 1Y3998, updated to 0.5064

The other two parameters are based on oil 1004-1. Guidance from the SP is needed if there is need to update them.

<sup>1</sup> s based on reference oil 1004-1

<sup>&</sup>lt;sup>2</sup> s based on reference oil 811-1 and 811-2 on 1Y-3998 liners

- 1 Effective for all tests completed on or after this date.
- 2 \*\*\* = currently in effect.
- 3 Transformation for TGF is ln(TGF+1).
- 4 Transformation for TLHC is ln(TLHC+1).
- 5 Initial targets based on 1004-1.
- 6 Three runs on 810-1 and five runs on 810-2.

- 7 Initial targets based on 1004-2.
- 8 Initial targets based on 811-1
- Targets valid for 1Y3998 liners only
