MEMORANDUM: 13-043  
DATE: July 22, 2013  
TO: Mack Test Surveillance Panel  
FROM: Sean A. Moyer  
SUBJECT: T12 Severity Adjustment Freeze

On the July 15, 2013 Mack Test Surveillance Panel conference call, the panel approved the use of UUXO hardware for T12 testing. In doing so it was agreed that going forward each lab's severity adjustment values would be frozen at the values determined as of the last valid reference test on STWN hardware. These severity adjustment values will remain in place and will not be updated until additional data on UUXO hardware has been generated and reviewed by the surveillance panel.
