**Subject:** Mack Surveillance Panel Teleconference Minutes - February 28, 2011

The primary purpose of the teleconference was to plan the implementation of the T-12 W batch bearings (STWN hardware kits). So far Lubrizol's compositional and dimensional analyses have not raised any concerns. After brief discussion, it was moved (Shank, Moritz) to use W Batch bearings, with each lab to start a T-12 reference by March 15, 2011; calibrated stands may continue to run old hardware once the requirement to start a new hardware reference has been met by the lab. The motion carried 8-0-3.

The panel's next teleconference will be held on March 9 to discuss T-11 fuel/severity analysis. Possible face-to-face meetings may be held the week of April 11.

Best Regards,

Jeff Clark
