Comments:

ExxonMobil	<p>AX.2.1.3: average engine torque AX.2.1.6: average load AX.3.1.3: average torque</p> <p>Are all three of these supposed to be the same thing? Should we align on the same term for all three (suggest "average torque")?</p>
Intertek	<p>in paragraph AX.4.2 there are no instructions on how to proceed in the event a level 3 ei alarm is triggered when attempting to calibrate a stand on a new, but approved fuel for that stand/lab. I believe the T-11 also has the same wording as the T-13 and would need to be addressed as well.</p>
