REPORT PACKET REVISION NOTICE:      IIIH70-20200526

VERSION:                                      20200526

EFFECTIVE DATE:                            20200610

DATE:                                         June 3, 2020

TO:     Sequence III Surveillance Panel

FROM:                                         Richard E. Grundza

Recently, an error was noted in the data dictionary for the Sequence IIIH70 report packet. A repeating field was being used as a pass/fail parameter, 60 Hour Viscosity Increase, on Form 4. This error had the potential to cause issues when transmitting and uploading test results. Version 20200526 creates a separate field for these results and is available from the TMC Website. Due to the need of test sponsors to report these data for active categories, the panel has asked for a shortened implementation period. As a result, these changes are effective June 10, 2020.
