Re: CPD Technical Memo 1  
Camshaft / Ferrous Metal Storage Best Practices

Cc: Mr. Rich Grundza/ Test Monitoring Center

This Technical Memo is intended to remind users of the ASTM Seq. IVA Testing Method that the OHTKA24E-004-1 camshafts should be inspected periodically during the materials storage life and possibly repackaged in fresh Rust Veto and VCI paper. The three batches of materials were all processed from early 2014 through the middle of 2014. As with all ferrous materials and packaging, there is a storage life.

If any user of the test would like OHT to repack material or provide materials for repacking for continued safe storage, please do not hesitate to contact me.

Best regards,

Jason H. Bowden  
OH Technologies, Inc.
