Sequence IVB Information Letter 23-2 Sequence Number 6 November 30, 2023

TO: Sequence IV Surveillance Panel

SUBJECT:1. Corrected Test Method for Sulfur determination in received Fuel2. Alternate motor for RAC Coolant Pump

During the November 14, 2023, Sequence IV Surveillance Panel Conference Call, the panel approved the following changes to Test Method D8350:

- 1. Recently, it was noted that Sections 7.2.2 and 7.2.2.2 reference Test Method D5453 as the method for analyzing the fuel for sulfur. However, the Certificate of Analysis indicates that the fuel supplier uses D2622 for determination of sulfur content in the fuel. Sections 7.2.2 and 7.2.2.2 have been updated to reflect D2622. Also, D5453 has been removed from referenced documents as these two sections are the only places where this document is referenced.
- 2. The panel agreed to allow substitution of the RAC Coolant pump motor with any motor with a horsepower rating of 1.5 horsepower and 3450 RPM. Note A has been added to Table A9.2 to reflect this modification.

The attached revised sections of Test Method D8350 are effective November 14, 2023.

Delete D5453 Test Method for Determination of Total Sulfur in Light Hydrocarbons, Spark Ignition Engine Fuel, Diesel Engine Fuel, and Engine Oil by Ultraviolet Fluorescence

7.2.2 Fuel Analysis—Monitor the test fuel using good laboratory practices. Analyze each fuel shipment to determine the value of each parameter for fuel sulfur as described in Test Method D54532622, existent gum as described in Test Method D381, RVP as described in Test Method D5191, and API Gravity as described in Test Method D4052. Compare the results to the original values supplied by the fuel supplier. The analytical results shall be within the tolerances shown in parentheses beside each parameter. This provides a method to determine if the fuel batch is contaminated or has aged prematurely. If any analytical result falls outside the tolerances, the laboratory shall contact the fuel supplier for problem resolution.

7.2.2. Analyze the fuels using Test Methods D54532622, D4052, D381, and D5191. 7.2.3 Fuel Shipment and Storage—Ship the fuel in containers with the minimum allowable venting as dictated by all safety and environmental regulations, especially when shipment times are anticipated to be longer than one week. Store the fuel in accordance with all applicable safety and environmental regulations. If the run tank has more than one batch of fuel, document the most recent batch in the test report.
