6555 Penn Avenue  
Pittsburgh, PA 15206-4489  
(412) 365-1000

MEMORANDUM: 01-102  
DATE: August 3, 2001  
TO: Data Communications Committee  
FROM: Richard E. Grundza  
SUBJECT: Editorial Changes to Form 8 of Sequence VG Report Forms

At the May 22, 2001 Sequence V Surveillance Panel Meeting, the panel agreed to not require that Fuel Dilution, TBN and Viscosity increase at 100°C measures be performed. However, the panel agreed to allow these measurements be performed if requested by the test sponsor. Form 8 has been revised to include a note to show that these measurements are no longer required. No revision to the version of the report forms or data dictionary has occurred with this editorial change. The current report form and data dictionary version (20001214) is still in effect. A copy of revised Form 8 is attached. Copies of the report forms are also available at the TMC website.
