REPORT PACKET REVISION NOTICE: VG-20020801

VERSION: 20020801

EFFECTIVE DATE: August 1, 2002

DATE: August 1, 2002

TO: Sequence VG Surveillance Panel

FROM: Frank M. Farber

At the May 15, 2002 Sequence VG Surveillance Panel meeting, the panel agreed to a number of changes, which included recording of Lambda for both left and right cylinder banks, replacing rocker cover varnish with cam baffle varnish and dropping cylinder bore wear measurements. Also, during beta testing it was suggested that the fields for oil addition cycle numbers, test hour where oil addition took place and test hour where blowby measurements were taken be changed to repeating fields. These changes have been made. Version 20020801 is available from the TMC Website. This version supersedes Version 20020606 that was released previously. These changes are effective August 1, 2002.
