

## Emergency CONFERENCE CALL NOTES

- I. Emergency Industry Conference Call for Rating Template Differences found at the January 11, 2006 rater calibration workshop. Held on January 17, 2006 2:00 PM EST
- II. Attendees on Call
  - Don Bartlet, LZ
  - Brian Koehler, SWRI
  - Cory Koglin, Afton
  - Marty Rose, Afton
  - Don Lind, TMC
  - Dale Smith, Parc Chair
- III. The raters with the help of the Don Lind found that the Axle Cover Rating Template for the L-33-1 rating could be placed in two possible positions with a difference in the area covered with each of the possible positions.
- IV. Discussion around cause was brief based on the comparisons of the templates. The two positions of the template could change the position of the template by 0.010 in. The issue is not the actual position of the template but the possibility of getting different results based on the two possible positions of the templates.
- V. Each of the labs have different numbers of templates and numbers in use. The labs agreed to send their new and old templates to one location to have them compared and marked for future rating. The final results of the findings in the motion. The continuing stand reference system will show if there is a difference in reference results.
- VI. Motions: All labs will ship all their new and all but one old template to be delivered January 20, 2006 to PARC for comparison. Each template is to be tagged with the lab and new or old. Dale Smith (PARC) and Don Lind (TMC) will review, approve mark in the same orientation, and serialize the templates. The controlled templates are to be return shipped to the labs by January 26, 2006. PARC will replace the LRI template from one of their set. The controlled templates will begin being used with the next stand reference in each of the labs.  
Motion: Brian Koehler  
Second: Don Lind  
Vote: All in favor
