TO: All Gear Lubricant Presenters

Information Letter: GL-18-01

Subject: L-37 Gleason Testing Data

Dear Presenters:

Based on the August 9, 2017 ASTM Meeting held at PRI Headquarters in Warrendale, Pennsylvania, it was determined that the LRI Reviewers for L-37 will accept the results utilizing the new Gleason hardware once the new test procedure is approved and assigned an ASTM D number. The new test procedure has since been approved and assigned ASTM D8165.

Presenters are permitted to provide L-37 test results using Gleason hardware prior to the update of key LRI documents i.e., J2360, PD4000, etc.

It was also determined that the "RGL Form 3: Summary of D6121 Calibration Test Results" should be revised to include the new test procedure number (D8165) in the form title.

Should you have any questions concerning this action, please contact me at PRI Headquarters at +1 724-772-8647 or via email at wgrubbs@p-r-i.org.

Sincerely,

Wendy L. Grubbs
QPL Development Coordinator
