

Test Monitoring Center

6555 Penn Avenue
Pittsburgh, PA 15206-4489
(412) 365-1000

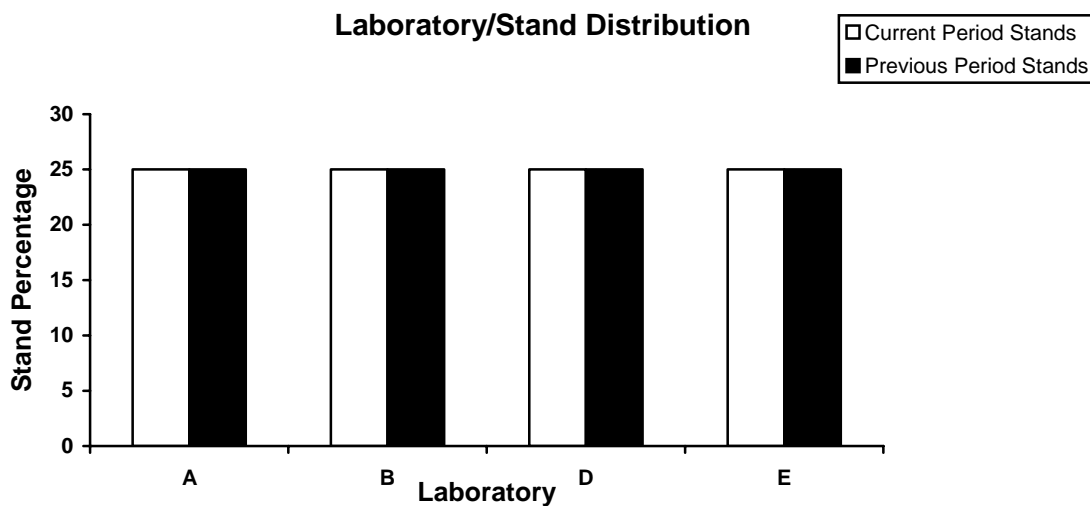

MEMORANDUM: 07-051
DATE: October 3, 2007
TO: Don Bartlett, Chairman, L-37 Surveillance Panel
FROM: Donald Lind
SUBJECT: L-37 Reference Test Status from April 1, 2007 through September 30, 2007

The following is a summary of the L-37 reference oil tests that were reported to the Test Monitoring Center during the period April 1, 2007 through September 30, 2007.

Lab/Stand Distribution

	Reporting Data	Calibrated as of 9/30/07
Number of Laboratories	4	4
Number of Stands	4	4

The following chart shows the laboratory/stand distribution:

The following summarizes the status of the reference oil tests reported to the TMC:

	TMC Validity Codes	Number of Tests
Operationally and Statistically Acceptable	AC	14
Failed Acceptance Criteria	OC	0
Operationally Invalid (Lab Judgment)	LC	1
Not Acceptable For Intended Purpose	MC	0
Aborted	XC	0
Total		15

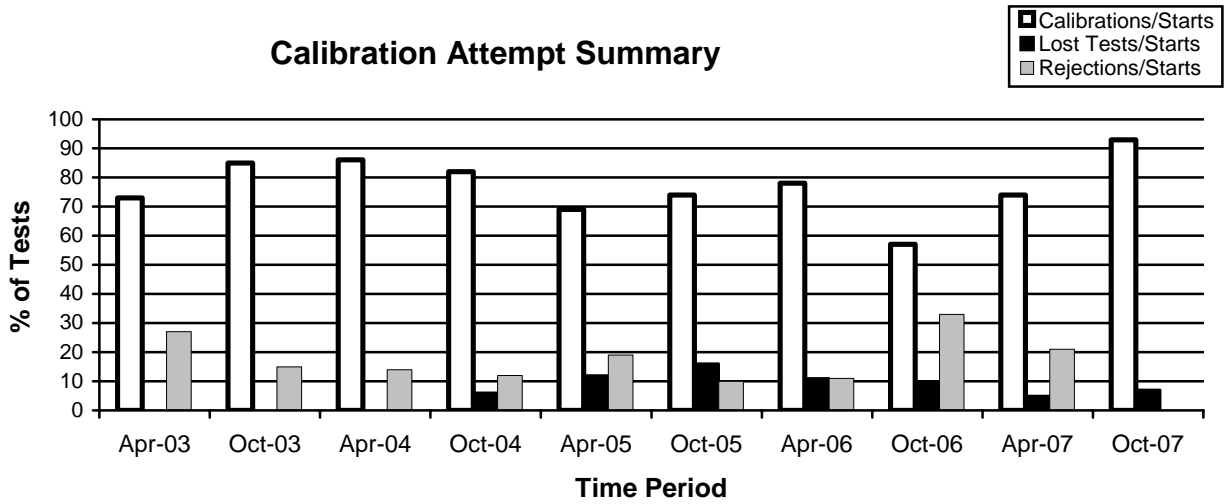

The following summarizes the acceptable and failed acceptance criteria tests by gear batch:

	Gear Batch	n-size	Acceptable	Failed Acceptance Criteria
Lubrited	L247/T758A	2	2	0
	V1L686/P4L626A	1	1	0
	Total	3	3	0
Non-lubrited	V1L417/P4L792	11	11	0
	Total	11	11	0

Additional Tests

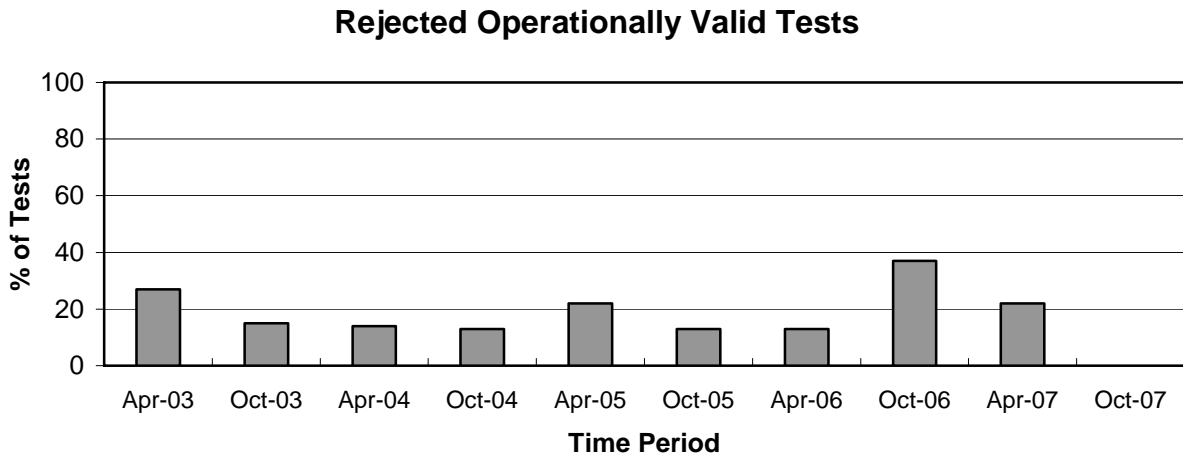

There were 56 additional tests conducted this report period. Forty-four of these tests were conducted to evaluate new lubrited hardware, gear batch B6L566/P4L792. Additionally there were six tests conducted to evaluate a new lubriting process and six tests conducted to evaluate a modified break-in procedure.

Calibrations per start, lost tests per start and rejection per start rates are summarized below:

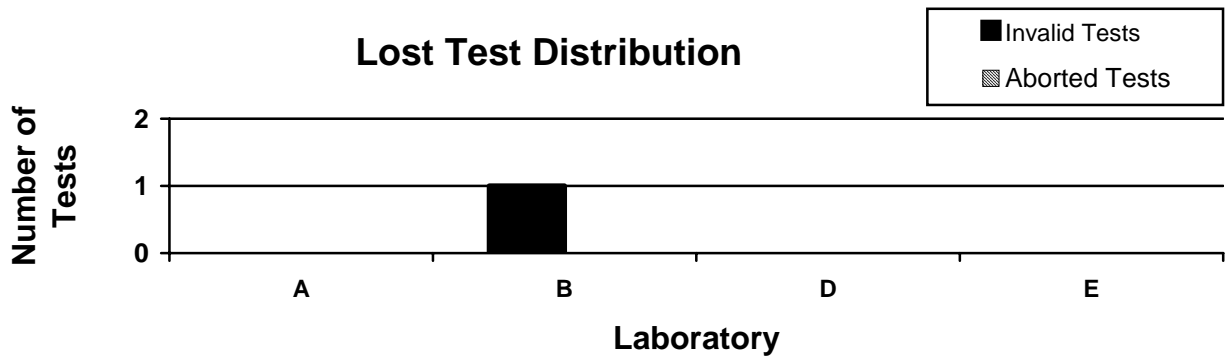

The calibration per start and lost test per start rates have increased with respect to the previous period. The rejected per start rate has decreased with respect to the previous period.

The operationally valid statistically rejected test rate, as shown below, indicates a decrease with respect to the previous period. There were no statistically rejected tests this report period.

The laboratory distribution of lost tests is shown below. A detailed list of reasons for tests declared operationally invalid or aborted is shown in Table 3.

Severity and Precision

The mean Δ/s by gear batch, overall mean Δ/s , and shift in merits for the operationally and statistically valid calibration tests reported this period are tabulated below for lubrited and non-lubrited hardware. Severity is summarized for this report period by laboratory, hardware, and gear batch in the attached Table 2.

LUBRITED HARDWARE						
Parameter	Gear Batch	N	Δ/s	s^D	Overall Δ/s	Overall Shift In Merits
Wear	V1L686/P4L626A	1	1.04	---	0.62	0.34 ^C
	L247/T758A	2	0.41	0.02		
Ridging	V1L686/P4L626A L247/T758A	1	0.83	---	-0.05	-0.03 ^{A,C}
		2	-0.48	1.44		
Rippling	V1L686/P4L626A L247/T758A	1	-0.80	---	0.00	0.00 ^{A,C}
		2	0.41	0.44		
Pitt/Spall	V1L686/P4L626A L247/T758A	1	0.38	---	0.58	0.25 ^{B,C}
		2	0.68	0.54		

^A Level for determining shift in merits (8.0)

^B Level for determining shift in merits (9.3)

^C Used SA standard deviation as published in the LTMS document for determining shift in merits

^D A straight standard deviation was used. The number of tests conducted this report period was too small to calculate an accurate pooled standard deviation.

NON-LUBRITED HARDWARE						
Parameter	Gear Batch	N	Δ/s	s^D	Overall Δ/s	Overall Shift In Merits
Wear	V1L417/P4L792	11	-0.17	0.73	-0.17	-0.12 ^C
Ridging	V1L417/P4L792	11	-0.33	0.93	-0.33	-0.48 ^{A,C}
Rippling	V1L417/P4L792	11	0.24	0.97	0.24	0.20 ^{A,C}
Pitt/Spall	V1L417/P4L792	11	-0.13	0.58	-0.13	-0.08 ^{B,C}

^A Level for determining shift in merits (8.0)

^B Level for determining shift in merits (9.3)

^C Used SA standard deviation as published in the LTMS document for determining shift in merits

^D A straight standard deviation was used. The number of tests conducted this report period was too small to calculate an accurate pooled standard deviation.

Industry Control Charts

Lubrited

Figures 1 through 4 are the lubrited industry control charts for pinion Wear, Rippling, Ridging, and Pitting/Spalling, respectively. Figures 5 through 8 are the lubrited industry control charts of the last 20 test results for pinion Wear, Rippling, Ridging, and Pitting/Spalling, respectively. EWMA charts for pinion Wear, Ridging, Rippling, and Pitting/Spalling were in control this report period.

Non-lubrited

Figures 9 through 12 are the non-lubrited industry control charts for pinion Wear, Rippling, Ridging, and Pitting/Spalling, respectively. Figures 13 through 16 are the non-lubrited industry control charts of the last 20 test results for pinion Wear, Rippling, Ridging, and Pitting/Spalling, respectively. Severity EWMA charts for pinion Wear, Rippling, and Pitting/Spalling were in control this report period. Ridging triggered one severity EWMA warning alarm. The alarm does not appear to be related to any one lab, stand, gear batch, or reference oil. Precision EWMA charts for pinion Wear, Ridging, Rippling, and Pitting/Spalling were in control this report period.

TMC Lab Visits

There were four lab visits this report period with one discrepancy to report. The cover plate spray nozzles were not in the specified locations as specified in Figure A5.1 of Test Method D 6121.

Information Letters

There was one information letter issued this report period. Information Letter 07-01, Sequence Number 36 was issued on July 16, 2007. Items changed with this information letter are documented in the L-37 timeline (Table 1).

Reference Oil Status

The following is a listing of reference oils with the expected number of tests remaining at the Test Monitoring Center and at the testing laboratories. L-37 reference oils are shipped in quantities of one gallon per test.

Oil	Number of Tests Remaining				
	Lab A	Lab B	Lab D	Lab E	TMC
127	2	3	2	2	7
128-1	1	2	3	4	0
128-2	4	3	5	2	256
151-3	1	2	10	1	*
152	2	0	0	1	0
152-1	2	1	5	4	142
153	0	0	0	0	0
153-1	5	8	6	8	123
155	5	5	7	5	**

* 14 Gallons (Multiple test area usage)

** 427 Gallons (Multiple test area usage)
