L42-1 updates

SWRI provided Sump temp plot to group from start of Conditioning 1 to end of Shock 2 using elapsed time.

Cory to revise section A5.2 to include what constitutes a shutdown

All labs have run least one of their matrix runs if not 2. TMC will plot the data when it is received.

SWRI mentioned they had high torque noise on conditioning 1. Their instrumentation shop is debugging.

The labs were asked how they calculate wheel speed min, max, avg.
Lubrizol and SWRI use one wheel speed
Parc and Afton use both wheel speeds
