

## **L42 Task force conference call March 22<sup>nd</sup>, 2006**

### Attendees:

Don Lind  
Chris Schenkenberger  
Brian Koehler  
Cory Koglin  
Dale Smith

Review proposed testing matrix for L42-1 given by SP at the February ASTM meeting.

### **Panel suggestion:**

Run a reference period: 3 passing oils, 1 failing oil.

Wait 2 days (do not use any setups, only let engine warm up) to see if stand drifts.

Run again 3 passing oils, 1 failing oil.

Run and report all tests regardless of results (unless uncontrollable situation-power outage, etc).

The TF has agreed they will run 3 passing oils, 1 failing oil. Wait a minimum of 2 days and run again 3 passing oils, 1 failing oil. The order of the oils is not to be changed, 3 passing oils first, then failing.

The TF has also agreed to ship all test parts to Pittsburgh in April for review.
