

OSCT Surveillance Panel Meeting Minutes

From Teleconference Conducted on 6/22/07

Don Bell (OSCT Chairperson)

6/22/07

Attendees:

Don Lind (TMC)

Rachel Jackman (Army)

Don Bell (Afton)

Becky Grinfield (SWRI)

Diane Misich (Lz)

Thelma Marougy (Eaton)

Sal Rea (Infineum)

Minutes:

We reviewed the recent reference seal data from the test labs that is available on the TMC website for the new fluoroelastomer batch, FL371, consisting of 200 slabs. Inspection of the FL371 data relative to Shewhart severity limits shows that shore hardness, % volume change, and % elongation for FL371 fall within the current fluoroelastomer acceptance bands and very close to typical using TMC reference oils 160-1 and 161-1.

Motion by B. Grinfield and seconded by T. Marougy: Effective 6/22/07, fluoroelastomer batch FL371 is approved for reference and candidate oil tests since data from both labs are within acceptance bands. Motion approved (7 approved/0 abstentions/0 opposed).
