CRC Project No. CD-16

To The Participants of the
CRC Heavy Duty Rating Workshop

The 2005 CRC Heavy Duty Workshop was held October 16, 2005 through Thursday, October 20, 2005. Enclosed are the minutes for the workshop and a copy of all of the data generated. Also enclosed is your certificate of participation.

I would like to take this opportunity to thank you for your participation in this workshop. It is the full participation of the entire rating community that allows the CRC rating method to be the vital industry tool that it is. The input of each and every rater is a valued component of that tool.

Sincerely,

A handwritten signature in black ink, appearing to read "SP".

Scott Parke
CRC Workshop Coordinator

MINUTES
CRC HEAVY DUTY RATING WORKSHOP
SAN ANTONIO, TX

October 15-20, 2005

CRC Workshop Coordinator: Scott Parke
CRC Deposit Rating Panel Leader: Tony Barrera

Sunday, October 15, 2005 – Workshop equipment was set up between 07:00 and 08:00 by CRC workshop coordinator Scott Parke and Frank Farber of the TMC. Several volunteers from among the attendees also lent a hand. The equipment had been collected from storage and brought to the hotel by Scott and Frank the day before.

Hardware available for rating included aluminum pistons of both square cut and keystone ring groove design, the crowns of two-piece iron pistons from Mack and Caterpillar, and one-piece iron Caterpillar C13 pistons. A Cummins rocker cover and oil pan for sludge rating and liners and rings from a 6V92 were also available.

As per usual practice, the session began with every rater being issued a new CRC rust/varnish rating scale. Each rater then rated both of the composite calibration pistons. Once the last rater finished the calibration pistons, the data was reviewed by the group and any discrepancies, or misunderstandings, or misapplication of definitions was discussed with the goal being for each rater to make whatever adjustments were necessary. Basic descriptive statistics (the so-called “Yi” data) were used to aid in evaluating the data generated. These tools have been used in the workshop in various iterations since 1997.

With calibration completed, raters were divided into three groups to ensure that data generation was evenly distributed among both raters and parts (see page labeled “Rater/Parts Crosstab” at beginning of attached data). Raters were asked to focus their attention first on their “primary” pistons (indicated by blue shading) before moving on to their “secondary” pistons (indicated by pink shading). Of course, all raters were encouraged to rate as many of the other pistons as they were able to as well. When rating concluded for the day (approximately 17:00), a total of 99 ratings were completed.

Monday, October 16, 2005 – Rating began at approximately 08:00 and continued throughout the day until approximately 17:30.

Tuesday, October 17, 2005 – Rating again began at approximately 08:00. Data was collected until 10:00. After a break to allow data printout and copying, data review began at 11:00 continuing until 12:00. A total of 183 ratings were completed by the first group.

At 13:30, the session began with rating of the calibration pistons. The data from these ratings was reviewed and discussion closed out the day at approximately 17:00.

Wednesday, October 18, 2005 – Rating began at approximately 08:00 and continued throughout the day until approximately 17:00.

Thursday, October 19, 2005 – Rating again began at approximately 08:00. Data was collected until 10:30. After a break to allow data printout and copying, data review began at 11:00 continuing until 12:00. A total of 144 ratings were completed by the second group. At both sessions, rater color grouping was discussed. The familiarity the raters have gained with this tool over the past few workshops has deepened their understanding of how it can help them.

Over the course of the workshop, a number of the raters had had some discussion regarding the unavailability of training at recent workshops. Currently, Level II data is the mechanism available for assisted rating and this option was used by a few of the raters. In the meeting wrap-up, workshop coordinator Scott Parke opened the issue of training as a discussion topic.

Scott gave some of the history of recent workshop evolution and explained that training was removed as a component of the workshops because some of the participating companies felt that by providing training, their personnel were performing a service for the industry (in some cases competitors) for which they were not being compensated. Furthermore, these companies felt that it was detrimental to their organizations to have their most highly skilled raters unavailable to them for an extended period. The group was understanding of these concerns but nonetheless felt that there needs to be a formalized training mechanism available through CRC.

Scott described to the group one of the ideas that had arisen during the week. One option might be to have a separate session for novice raters held either stand-alone or in conjunction with the workshop. This session would, of course, require its own fee. The group (especially the novices) stated that they would be willing to pay for this additional service.

Some of the raters who had at least some experience or maybe had plenty of experience but with different hardware said that for them, a more helpful approach would be a return to the former workshop practice of having several of the very experienced raters available to provide occasional guidance. This idea, however, again would raise the issue of compensation for that service.

Earlier in the week, Mike Pansza had described a format used for some of the European workshops. In this format, the session begins with rating several calibration pistons as is the case here. After that but before moving on to rating the “assigned” pistons, there is a session where several pistons are rated with some guidance for those raters who request it. Discussion is freely permitted and encouraged during this session. A third and final session is then held in the same fashion as here with several more pistons. This option may be explored for a future workshop.
